

Georgiev, Martin M.R.

Group 3

Angelov, Angel A.R.
 Gherlan, Mirela Cristiana M.C.
 Gomoyurova, Alexandra A.A.
 Ivanov, Aleksandar A.H.
 Jagwani, Yash Y.
 Savov, Galin G.V.

Checkpoint 6 Sprint 5 15-01-2021

Contributed both on the software solution and the documentation for the project. Personally, I worked mainly on the plugin but I also contributed on the research report, made a second iteration for both the project plan and architecture documents. I also played the role of quality assurance for some of the documentation. I would like to think that I was very proactive throughout the whole project. I activated in various group activities and tried to keep a high communication level with all of the other group members. If anything, I am personally happy with my personal development. [Read less](#)

Worked on the architecture document, the bussiness process document as well as the coding for this sprint. I am really happy with his performance. He was really involved with the project throughout the whole semester and always helped our group. [Read less](#)

Martin was a part of the Development team and worked with Aleksandar to get the technical user stories done. He also worked on helping the team make some corrections to some documents and wrap up the remaining items. It was a pleasure to work with him throughout this project. [Read less](#)

Martin worked with code related user stories and succeeded in it in a short period of time. I am really happy to work with Martin as a teammate.

Martin has been very motivated and responsible, he worked on the code and documentation and also did the demo during the presentation. Absolute unit.

Worked on improving the documentation and the software side, took a part in the presentation doing the demo, which was good, collaborates and communicates really well. Thank you for your work that you have put into this project! [Read less](#)

Worked on finishing all user stories as well as assuring the quality of document deliverables. Did a splendid job on software implementation.

Checkpoint 5 Sprint 4 07-01-2021

Most of my contribution during this sprint was technical (software development). Nevertheless, I took the time and rewrote the project plan so that it meets all requirements. I would like to believe that I was proactive during this sprint and motivated the others to participate in group activities as well. We had an on-time delivery of all user stories and a strong communication channel with Amplexor. [Read less](#)

Great job at writing the code together with Alexandar and then showcasing it during the presentation. He also provided feedback for some of the documentation.

Worked on the coding user stories for the sprint. He was also present during all the meetings our team had. I am really happy with his performance this sprint.

I am more than happy with Martin's performance. He helped solve a big part of the issues regarding my technical issues, was a very solid person to work on the software side with and assured of the quality of some of our documentation. He also took a big part of the presentation. [Read less](#)

Worked on developing new code user stories and also helped everyone else with some other problems and gave some good advice for testing.

Martin is a really nice person to work with. He was part of the software team and as always, he is also solving the issues that might appear during the development of the application. He was presenting the demo really professional, even though the virtual machine was not working properly. [Read less](#)

Martin's strengths this sprint were in Technology as he worked on the logger, Collaboration, Communication, Presentation and Initiative. I do believe that Martin could have done more for Documentation, but as he already was occupied with handling the logger, I think it is okay to let this weakness slide. [Read less](#)

Checkpoint 4 Sprint 3 26-11-2020

I believe I took the initiative this sprint and was proactive. I was active in most group activities. Since my work for this sprint was tightly coupled with Aleksandar's, I can say that we managed to showcase a timely delivery on the user stories that were assigned to us. I hope I managed to approach the project professionally up to this point (and will continue to put efforts into doing so). Most of my overall contribution to the project was technical (the project's software side - research and software development). What I can do better is participate more in the documentation of the project. Therefore, I will be sure to take that into consideration. **Read less**

Was really helpful, always present in the group meetings we had and was part of 1 of the 2 coding teams we had set up for this project. I am really happy with his performance this sprint.

Martin's strength is technology. Always showing his initiative in this field. I can not find any weaknesses.

Martin's strengths this sprint were in Technology, Initiative, Collaboration and Communication. A weakness would be in Documentation, but Martin did his part in working with Aleksandar, Yash & Galin for the software. Nonetheless, great work. **Read less**

Martin spent a lot of his time on the translation memory to make sure everything works. Also helped with other general things if teammates needed assistance. No weakness.

Martin is also taking part in the technical team. He is giving good instructions and he finds really helpful material for the project. He takes part to all of our meetings and collaborates good with the team. **Read less**

Martin has a very good technical knowledge and is a great professional to work with. We spent long hours working alongside and he was always respectful in terms of taking breaks, scheduling, etc, as well as having great communication with me in terms of who does what in order to achieve the result as soon and as good as possible. I have nothing negative to say here. **Read less**

Checkpoint 3 Sprint 2 06-11-2020

I successfully completed my assigned tasks for this sprint. I am happy with the outcome. Me and Aleksandar focused entirely on software research and development. The sprint requirements were covered on time. [Read less](#)

Martin is doing good, always helping with programming part when others stuck, no weaknesses

Martin's strengths were in Technology and Collaboration. He worked well with Aleksandar to help build the application.

Martin was extremely helpful in writing the software part of the project as he was researching documentation and giving creative solution. No negatives I can think of.

Worked on the code with Alexander, helping a lot even though he has no way to actually write the code. No complaints, should continue the same way forward.

He is very active in the team, part of the software development team. Good communication between us.

Did a great job working on the software and was present during the team meetings.

Checkpoint 2 02-10-2020

I would like to believe that I have done my job for this sprint. I am happy with the outcome. I helped with software research and development for SDL Trados (mostly research) and provided the team some materials that I thought that would be useful for our upcoming work. If I had to write one weakness, it's that I am used to procrastinating. Nevertheless, we managed to motivate ourselves to complete everything on time and we even had a week to spare. **Read less**

Martin is doing really good in technology part. He showed really high skill in programming when we were doing our plugin. Also I can not say that he is bad in any other fields. Maybe he could improve his collaboration skill. **Read less**

Worked on the coding and the presentation and was present and helpful during the meetings. Good attitude towards the project.

Martin's strengths were in Technology, Collaboration, Communication and Presentation. He helped in developing the plugin. A weakness would be Documentation, but with the way we split the work, the main focus for him was the plugin. **Read less**

Good: Mainly worked on the code with Aleksandar, also helped with the presentation. Proactive.
Weakness: Can't think of any for this sprint

He has really good technical skills and he collaborates constructively with the team.

Martin is very well-off in the software department and makes for a very good software developer, also is a very good communicator.

Checkpoint 1 18-09-2020

Pretty active with group activities. Nice attitude towards the project. Satisfied with their work on the project so far.

Pretty solid and resourceful.

Attended all our group meetings and activities, took part in creating the presentation and has good communication skills.

He worked well with everyone even though he cannot be here in person yet.

good communication skills

Nice to talk to, works well
